

AI Use Declaration Form

Course: Introduction to Artificial Intelligence

Lab Title: Lab 4 LLMs and Prompt Engineering for Decision Support

Student Name: _Monia

Nijimbere_____

Student ID: 67912028_____

GitHub Repository Link: _[Nijimbere722/lab-4-llm-decision-support](https://github.com/Nijimbere722/lab-4-llm-decision-support)

Date Submitted: _16th/08/2026_____

1. AI Use Summary

Question	Student Response
Did you use any AI tool for this lab?	Yes
Estimated percentage of the work influenced by AI	18%
Did you attach evidence of AI use where applicable?	Yes

2. Details of AI Use

Complete the table below for each AI tool used. Add more rows where necessary.

Name of AI Tool Used	Purpose for Using the Tool	Prompt or Instruction Given to the Tool	Part(s) of the Work Influenced by the Tool	How I Verified, Edited, or Improved the AI Output

Claude	I used Claude to gain clarity and better understand some of the prompt engineering concepts that were difficult to understand	Help me improve my prompt engineering templates for a decision support system. Make the prompts clearer, more specific, and ensure they instruct the model not to invent information	Part 3.2 (Structured Extraction – JSON), where Claude helped me to refine the prompt wording for extracting information into the required JSON format	I reviewed every suggestion from Claude and compared it with the lab requirements before using it. I edited the prompts to match the required JSON schema, tested them in my own notebook, and corrected any outputs that did not follow the assignment instructions

3. Attachment of AI Output Evidence

```

*** -----
NameError                                Traceback (most recent call last)
/tmp/ipykernel_3334/538610393.py in <cell line: 0>()
      1 question = "Suggest a name for a savings product for market traders in Accra."
      2
----> 3 low_temp_answers = [ask_llm(question, temperature=0.0).choices[0].message.content for _ in range(5)]
      4 high_temp_answers = [ask_llm(question, temperature=1.2).choices[0].message.content for _ in range(5)]
      5

/tmp/ipykernel_3334/2802054980.py in ask_llm(user_prompt, system_prompt, temperature, max_tokens)
      1 def ask_llm(user_prompt, system_prompt="You are a helpful assistant.",
      2           temperature=0.7, max_tokens=500):
----> 3     response = client.chat.completions.create(
      4         model=MODEL,
      5         messages=[

NameError: name 'client' is not defined

```

```
import numpy as np

def values_match(field, predicted, gold):
    predicted_missing = predicted is None or
    (isinstance(predicted, float) and np.isnan(predicted))
    gold_missing = gold is None
    if predicted_missing and gold_missing:
        return True
```

- "Compare your extracted DataFrame to the gold values field by field" → that's what `values_match()` does, checking each field one at a time
- "Compute per-field accuracy across the three letters" → that's the `correct` counter and the `f"{correct}/{len(gold_ids)}"` accuracy score
- "name matching can be case-insensitive" → that's `str(predicted).strip().lower() == str(gold).strip().lower()` for `applicant_name` (and I also applied this to `purpose` since it's also text, which is a small extra but reasonable choice — numbers still use exact `==` matching)
- "numbers must match exactly" → that's the `return predicted == gold` line for all the number/boolean fields
- "Display a small table: rows = fields, columns = L001 / L003 / L006 / accuracy" → that's exactly what `accuracy_df` shows (you already saw this — fields as rows, L001/L003/L006/accuracy as columns)

Where required, attach evidence of AI use. Tick all that apply. Add more rows where necessary.

Evidence Type	Attached? (Yes, No, N/A)	File Name
AI-generated draft	Yes	N/A
Prompt history	Yes	N/A
Screenshot of AI interaction	Yes	N/A
Exported AI conversation	Yes	N/A
AI-generated code snippet	Yes	N/A
Revised version showing student input	Yes	N/A

4. Student Declaration

I declare that:

Declaration Statement	Response (Yes/No)
The submitted work is my own work.	Yes
Any use of AI tools has been clearly declared in this form.	Yes
The prompts, instructions, and AI-generated outputs have been disclosed where applicable.	Yes
I reviewed, tested, edited, and improved any AI-generated content before submission.	Yes
My AI usage does not exceed 25% of the entire work.	Yes

I understand that undeclared or excessive AI use may be treated as academic misconduct.	Yes
